Our products

Standing

Since we know the importance of standing, developing innovative standing frames is a matter that is very close to our heart. Standing is a major milestone in developing own locomotion skills. By putting users in an upright position, our standing frames improve vital functions, activate muscles, stimulate brain activity, and stabilize bony structures. Users are able to participate in everyday life at eye level. Our upright standers are a perfect fit, meet individual requirements and offer built-in growth options. Standing frames by Rehatec® accompany users from early childhood to adulthood.

Seating

Various disease patterns, such as cerebral movement disorder, paralysis, or major developmental delays, require perfect support in a sitting position to improve the user's quality of life, to gain independence and to encourage increased participation. The expertise of many therapists, specialist dealers and users is always part of our development process since we want to satisfy all therapeutic requirements and ensure a user-friendly, functional application. Our activity chairs are the result of good teamwork.

Lasse upright and supine stander – Sizes Mini to 2

REHATEC®

The height adjustable upright and supine stander Lasse moves young users from a supine to a standing position and enables them to stand at eye level with their friends. The variable transfer height ensures a safe, stress-free positioning of the user in supine.

Jumbo prone & upright stander

REHATEC®

The Jumbo upright stander is a standing frame for children's first successful standing training. For children with hip-knee-ankle-foot orthosis, a separate model is available to prevent children from falling. The orthosis is securely attached to the stander.

Pauli activity chair

ReHATEC®

The Pauli activity chair is a child's companion in everyday life and at preschool with built-in growth options. Caregivers hardly need any tools to adjust the height, depth or angle of its footplate, seat plate or backrest.

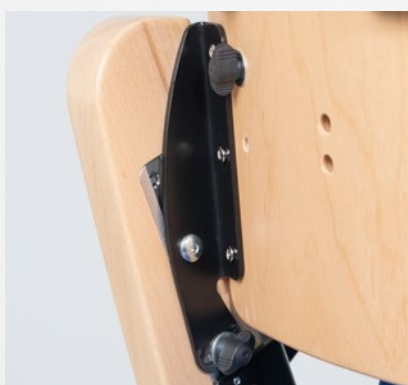

The KiGa version offers a footplate that is particularly low to the ground and it thus adapts perfectly to low table heights.

Pauli size 1 KiGa
Frame colour: beech
Fabric: Blue Skai
